Subject: Gulfco comments on workplan

Gary-

I circulated your inquiry, but I have not received comments about the types of plant species and minimizing impacts to wetland areas from construction.

I would like to provide comments on your inquiry about material used for new fill regarding hot spot removal. The type of fill material should be comparable to the removed material, but should contain a high volume of organic matter such as the O layer or a mix of O and A layers of adjacent areas. The fill should include the surface layers of a natural and undisturbed area with at least 18 inches of organic material.

I recommend that the Trustees have a meeting with the RP's and we try to closely follow the remedial schedule. I'll provide further comments on the work plan after I've had some time to discuss further with others.

Let me know if you have any further concerns.

Thanks,

Tommy
